Jorge Manuel López Acevedo

Full Stack Developer

Buenos Aires, Argentina | jorglopez96@gmail.com | +54 9 11 5118-9401 | linkedin.com/in/jorglopez96 | github.com/jorgelopez96

PROFILE

Full Stack Developer with almost two years of experience building web, mobile, desktop and real-time apps with React, Svelte, Node.js and TypeScript. Built complete projects from design to deployment, such as an internal sales tool and a WebRTC voice chat app. Looking for my first role on a development team, remote or hybrid.

TECHNICAL SKILLS

Frontend	React, React Native, Svelte / SvelteKit, Redux, Context API, JavaScript (ES6+), TypeScript, HTML5, CSS3, SASS, Tailwind CSS, Bootstrap
Backend	Node.js, Express, REST APIs, JWT, Clerk, MVC architecture
Real-time & desktop	WebRTC (LiveKit), WebSockets, Tauri (Rust), PWA
Databases	MongoDB, PostgreSQL, Supabase, Firebase, PocketBase (SQLite)
Testing	Vitest, Playwright
Tools	Git, GitHub, Docker, Linux (systemd), Postman, Vite, Vercel

EXPERIENCE

Full Stack Developer · Freelance

May 2026 – Present

QRS Digital · Herramienta SP — herramienta-sp.vercel.app

Stack: React, TypeScript, Vite, Supabase (PostgreSQL + RLS), Clerk, Vitest

- Developed an internal web app for a motorcycle insurance sales team that centralizes data entry, quoting and message drafting, speeding up every sale
- Designed a rule-based parser that extracts 5 customer fields (name, national ID, postal code, year and model) from free text, in any order and with a per-field confidence level
- Automated coverage, pre-closing and closing messages from templates, ready to send
- Solved discount calculation with a linear system based on two quotes, accurate to the last peso
- Implemented authentication with Clerk integrated with Supabase, with per-user RLS policies and admin roles
- Validated credit cards (Luhn and brand detection) and CBU accounts before each sale, preventing entry errors
- Ensured quality with 19 Vitest test suites, TypeScript strict mode and ESLint with zero exceptions

PROJECTS

Thunderop

thunderop.com

Stack: SvelteKit (Svelte 5), TypeScript, Tauri 2 (Rust), WebRTC (LiveKit), PocketBase, Caddy, Vitest, Playwright

- Single-handedly built a Discord-style voice chat app for invite-only groups, with a Windows desktop app (Tauri) and an installable web PWA, currently in beta with a group of users
- Implemented real-time voice and screen sharing with WebRTC over a LiveKit SFU, up to 1080p at 60 fps, with noise suppression and native system audio capture in Rust (WASAPI)
- Solved pixelated streams by analyzing server logs: bandwidth estimation started at ~5 kbps, so I switched to send-side BWE and removed simulcast, which had caused the regression
- Built the backend with PocketBase (SQLite), migrations and JavaScript hooks: chat with reactions and unread tracking, friends, presence, direct messages and role-based groups
- Deployed a self-hosted Linux server with systemd, Caddy (HTTPS) and dynamic DNS, with an automatic check that restarts voice when the public IP isn't detected, and shipped signed installers with auto-updates

CuidaTuWallet

cuida-tu-wallet.vercel.app

Stack: React, Firebase, Tailwind CSS, Context API

- Developed a personal finance SPA with authentication, session expiration and per-user data isolation
- Built a dashboard with custom SVG charts and credit card installment tracking

OsidisTech E-commerce

osidistech.vercel.app

Stack: React, Firebase, Bootstrap

- Developed an online hardware store with a catalog, shopping cart, checkout and real-time stock sync
